

How to Receive FieldView Email Reports

Summary: FieldView Plus users can use FieldView Email Reports to receive regular updates of planting activity to their smartphone.

- 1) Enroll in Email Reports on the Notifications Page of the FieldView Website – Add an email address and select the planters(s) to monitor and the reporting frequency to receive emails.
- 2) Receive Email Reports during planting based on the frequency selected (Field Change, Hourly, or Daily).

Step #1: Enroll in Email Reports on the Notifications Page in the FieldView Website.

- Login to <http://fieldview.precisionplanting.com> and go to Notifications.
- Click on Add Email to enroll a new email address.
- Enter your email address, choose Reporting Frequency (Field Change, Hourly, or Daily), and select which planters to monitor (All or select individual planters).
- Press “OK” – your email address is now registered to receive Email Reports.
- Note* If you want one email address to receive both Hourly and Daily Reports, simply enroll the email address twice – once for each Reporting Frequency.

Step #2: Receive Email Reports during planting according to your enrolled settings

- Every planter pass, FieldView syncs As Planted data to the PrecisionCloud (if data connectivity exists). This data is summarized and stored by time planted.
- Upon each Reporting Milestone (hour, day, field change), emails are sent to all enrolled email addresses summarizing the planting statistics for each machine enrolled.
- Below is a sample of a FieldView Email report. Each field has its own report section per planter –scroll down to see more fields within an email.

Planting Report - Hourly	
Test Field (Client Name / Farm Name) Planter Nickname – Planter Number	
Acres Planted	8.3
Avg Speed	4.4
Avg Population	38,288
Singulation	99.3%
Good Spacing	96.6%
Good Ride	99.2%
Down Force	
Loss of G.C.	1.7%
Good DF	97.5%
Excess DF	0.8%
