

Summary: FieldView users can save email .zip file attachments that contain Shape Files or 20/20 field (.dat) files into the FieldView app directly. This is an easier way to get prescription files or shared field files from another FieldView account into FieldView without having to use the web.

Step #1: Save Email Attachment to FieldView

- Open email and Long Press on an attached .zip file that contains either Shape Files or 20/20 Field Files.
- Choose “Open in FieldView” from the options presented
- FieldView will open with a message “Importing Files”

Step #2: Use files in FieldView App

- Shape Files will import to the Data Transfer screen where they can be transferred to 20/20
- Field Files will import and build maps on the iPad. Note* Use this to import field files from a different FieldView account.
